COLLEGE CODE : 9214

COLLEGE NAME : RVS School of Engineering and Technology

DEPARTMENT : Computer Science and Engineering

PROJECT DETAILS

NAME : Automating Employee Data

TEAM ID : SWTID-2026-5734

TEAM LEADER

NAME : PRABAKARAN M

STUDENT NM ID : A73550EC6665E72857240A81EFD7EE84

TEAM MEMBERS

1.SHEK ABDULLA A - 833CC310BAE97A795CB4A2A0B4842784

2.JEZIEL PRAISE SON M -EBAF8D41C926C3385D2422D41AE2E220

3.NIRANJAN A - A13731752A76845923349B89313C6803

Problem statement:

In most organizations, managing employee data such as personal information, department details, attendance records, and performance metrics is often done manually or across multiple disconnected systems. This leads to errors, data redundancy, delays in retrieving information, and difficulty in maintaining up-to-date records. Manual processes also consume significant HR and administrative tim
e, reducing overall productivity and increasing the risk of non-compliance with company policies.

Objective:

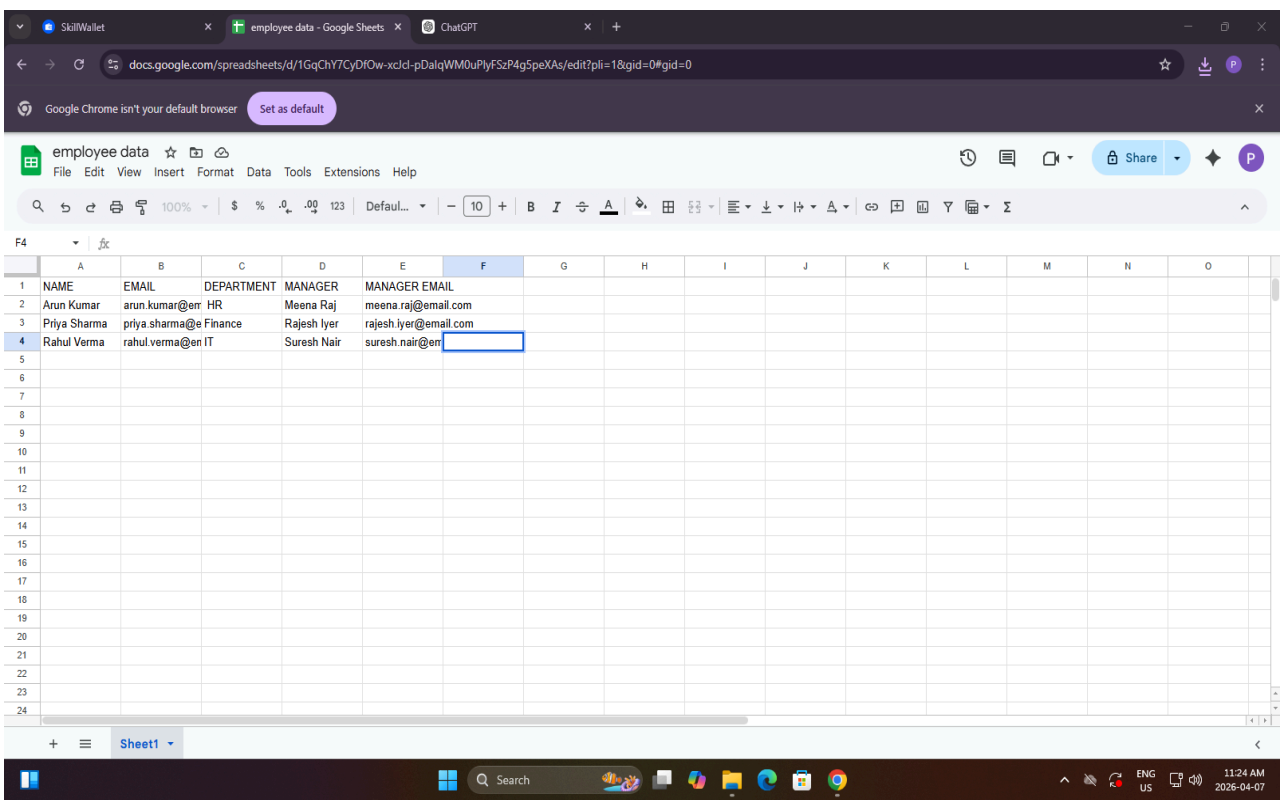
The primary objective of this project is to automate the collection, storage, and retrieval of employee data in a centralized system. This will:

- Ensure accurate, real-time access to employee information.
- Reduce manual effort and errors in data entry and maintenance.
- Enable quick reporting and analytics for HR decision-making.
- Improve overall efficiency and compliance in employee data management.

Import data from data source

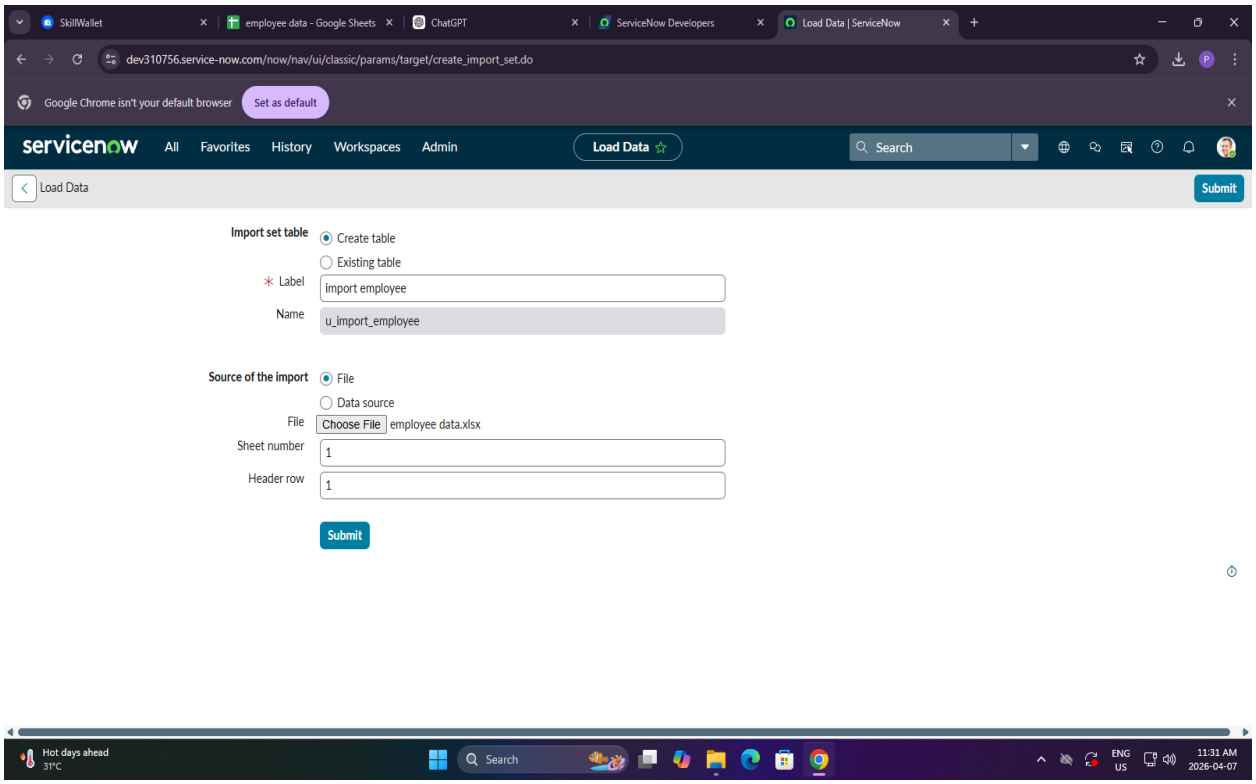
Activity 1:Create records in the Sheet

1. Open google sheet
2. Name the fields as name,email,department manager and manager's email
3. Enter some records
4. Save the sheet as: employee data
5. Download the file as .xlsx , .csv (or) .xml file



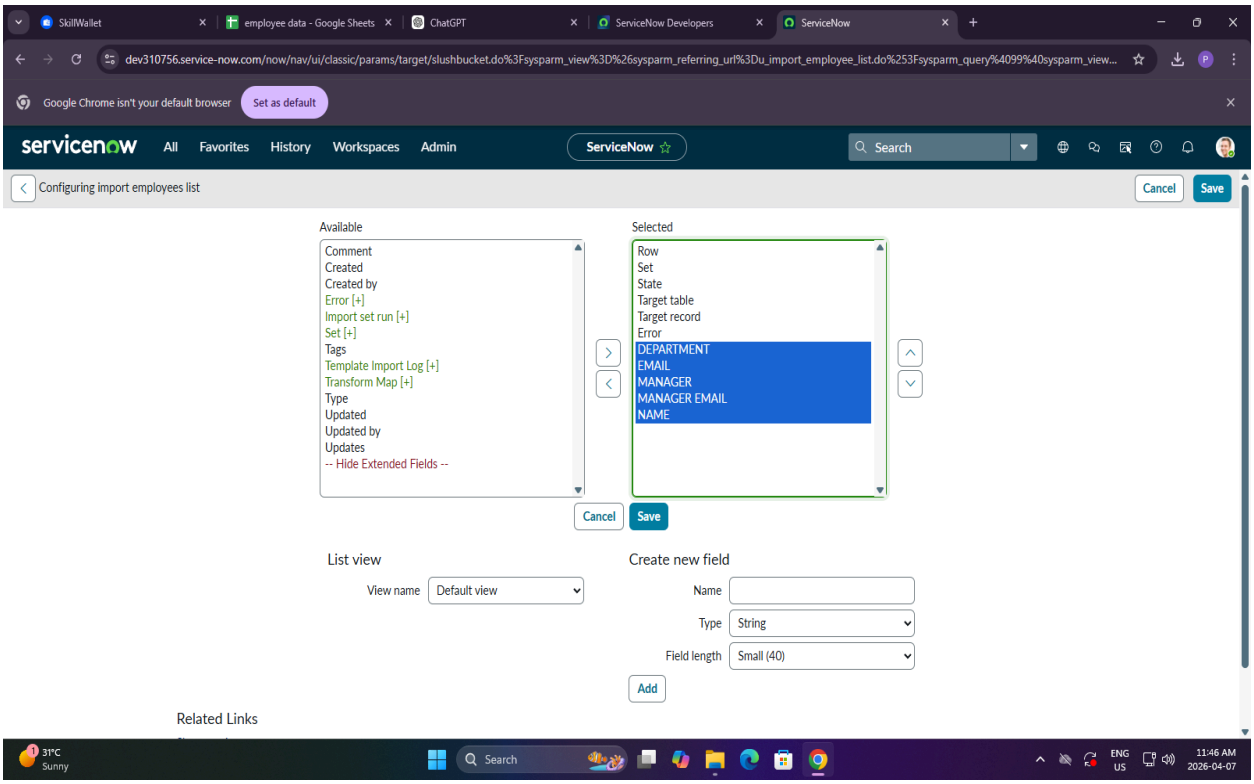
Activity 2:Import data

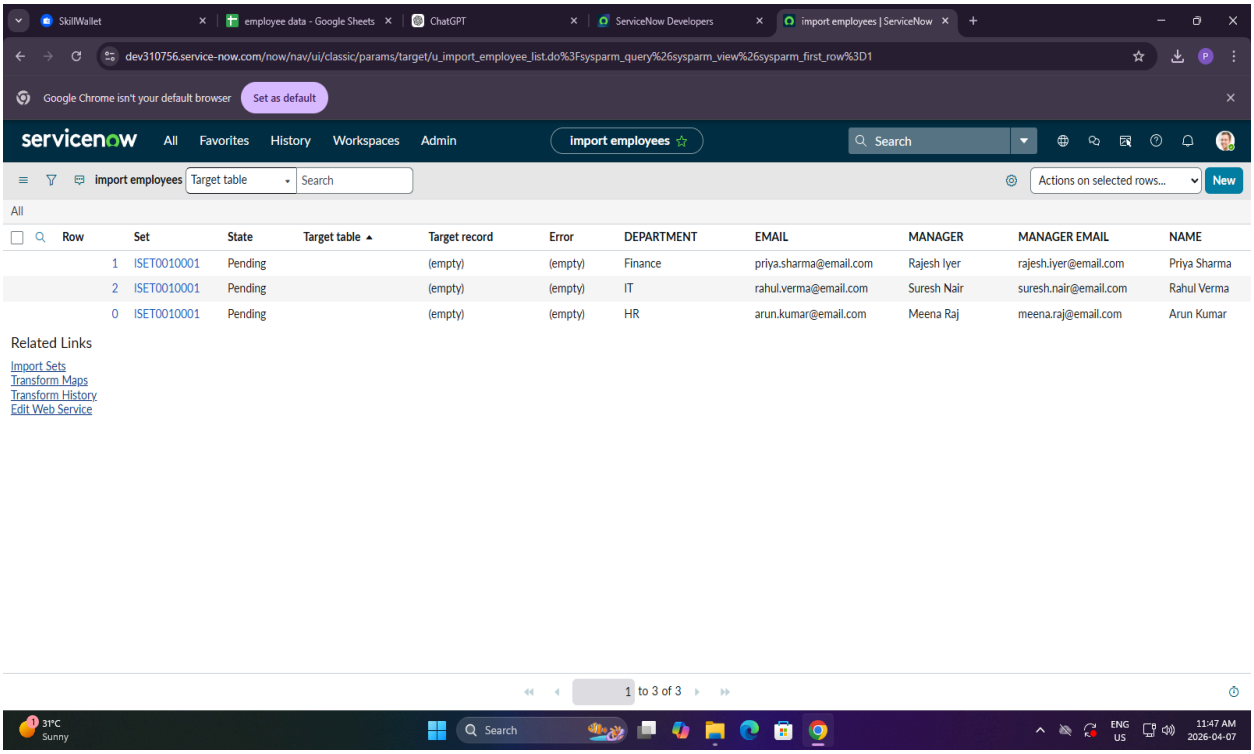
1. Open service now.
2. Click on All >> search for import sets
3. Select load data under system import sets
4. select create table
5. Give the the import set table name as: import employee
6. Choose the file which we created in the XL sheet.



7.The data is imported,click on personalized list

8.Add fields to the form.

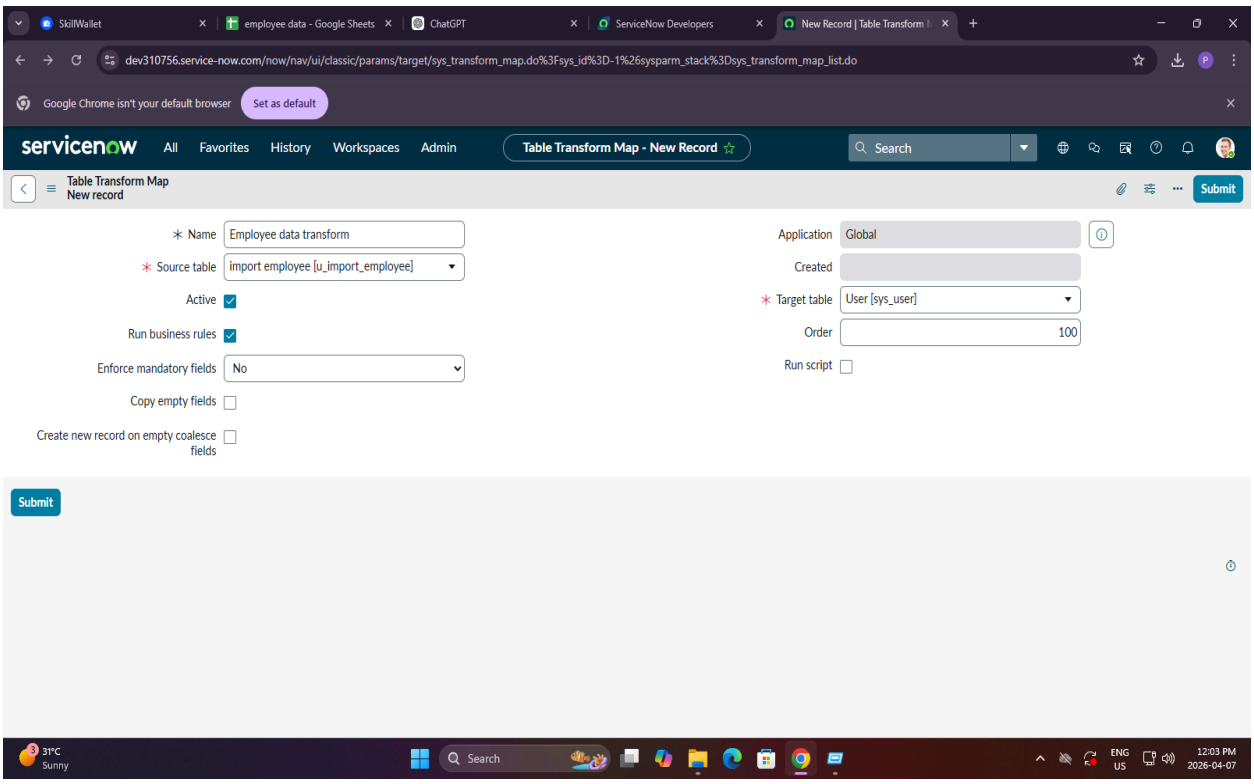




Row	Set	State	Target table	Target record	Error	DEPARTMENT	EMAIL	MANAGER	MANAGER EMAIL	NAME
1	ISET0010001	Pending		(empty)	(empty)	Finance	priya.sharma@email.com	Rajesh Iyer	rajesh.iyer@email.com	Priya Sharma
2	ISET0010001	Pending		(empty)	(empty)	IT	rahul.verma@email.com	Suresh Nair	suresh.nair@email.com	Rahul Verma
0	ISET0010001	Pending		(empty)	(empty)	HR	arun.kumar@email.com	Meena Raj	meena.raj@email.com	Arun Kumar

Activity 3:Create transform map

1. Open service now.
2. Click on All >> search for import set
3. Select create transform map under import sets
4. Click on new
5. Fill the following details to create a new transform map
6. Give name as: Employee data transform
7. Select source table: import employee data
8. Select target table: user[sys_user]
9. Save the form.

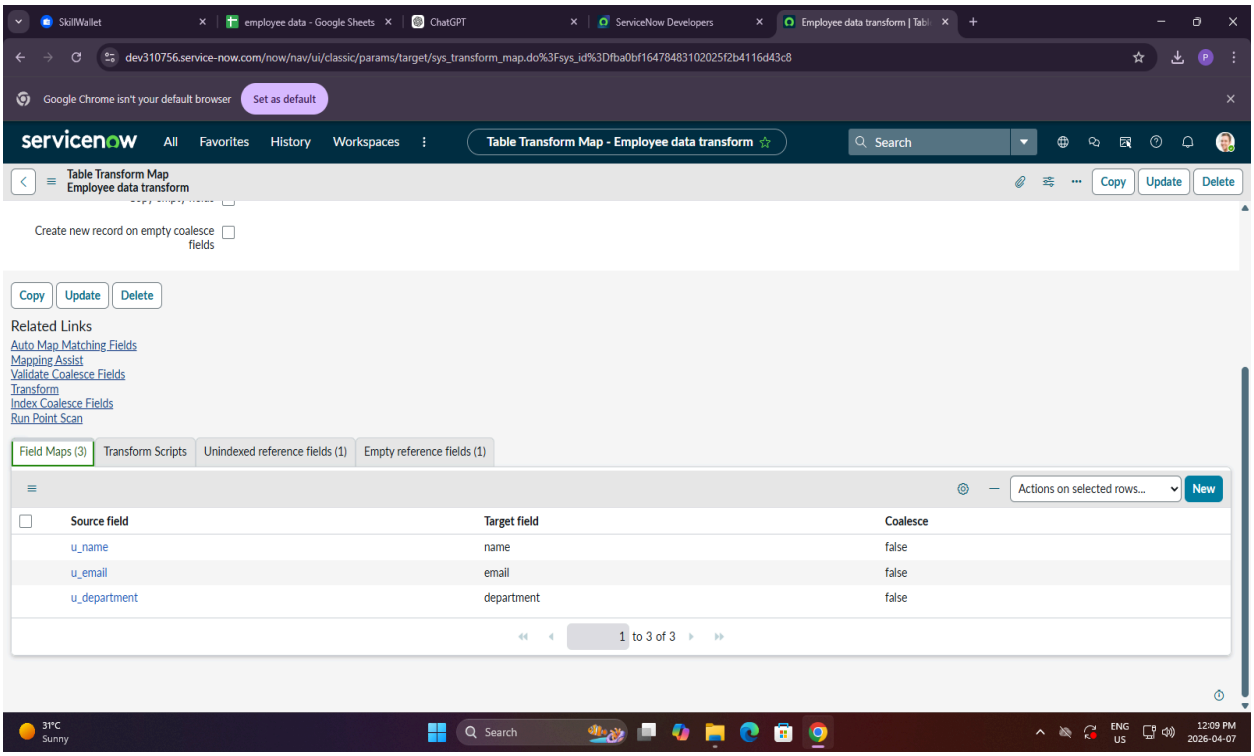


Activity 4:Match the fields using mapping assist

1.Scrolled down the created transform map form

2.Click on auto matching fields

3.Then in the mapping fields some fields are matched



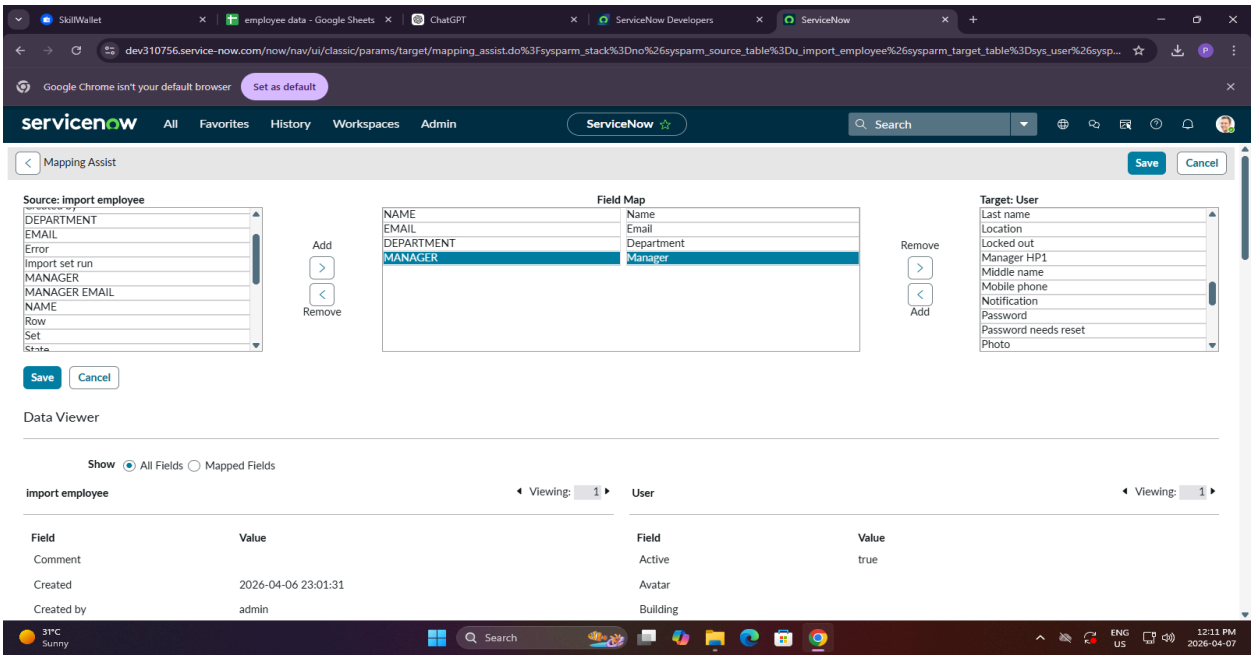
4.Using mapping assist map the manager field.

5.Select the fields which you are mapping in the staging table and target table

6.Select manager in source table and add

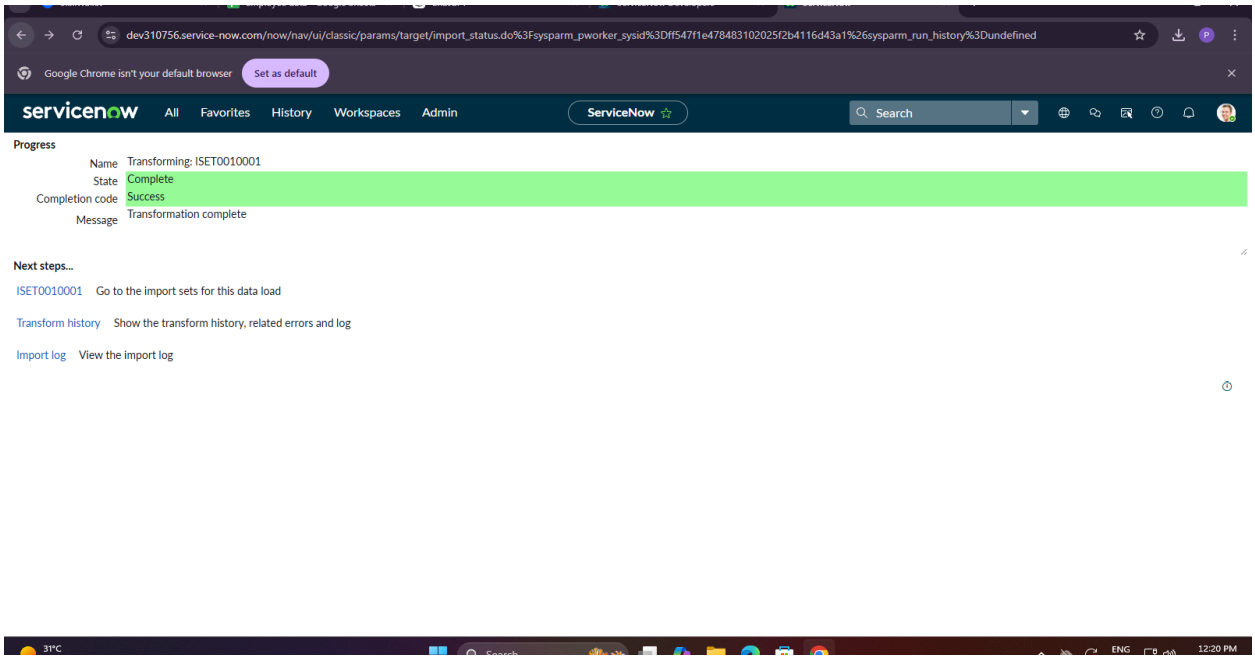
7.Select manager field in target table

8.Click on the save button.



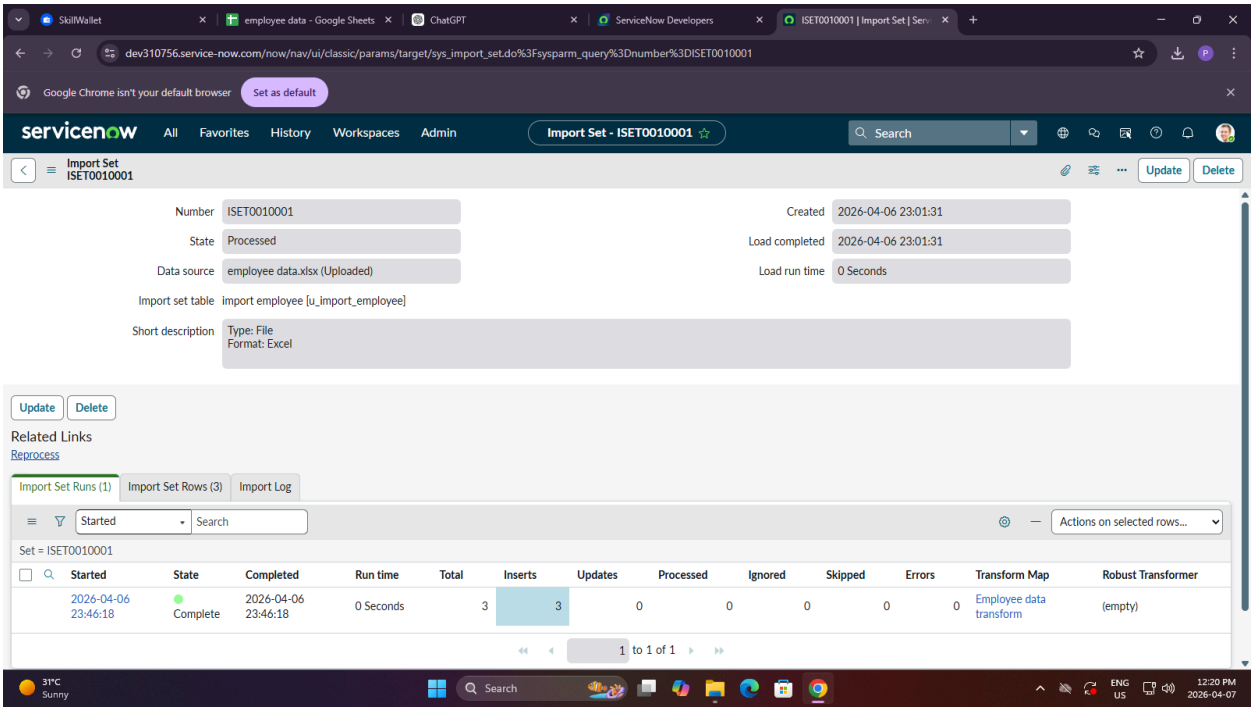
Activity 5:Transform the Data

1. Click on transform in the related links.
2. Click on transform.
3. Data's transform state is completed.



4.Click on ISET0010003 under next steps

5. Two rows are inserted.

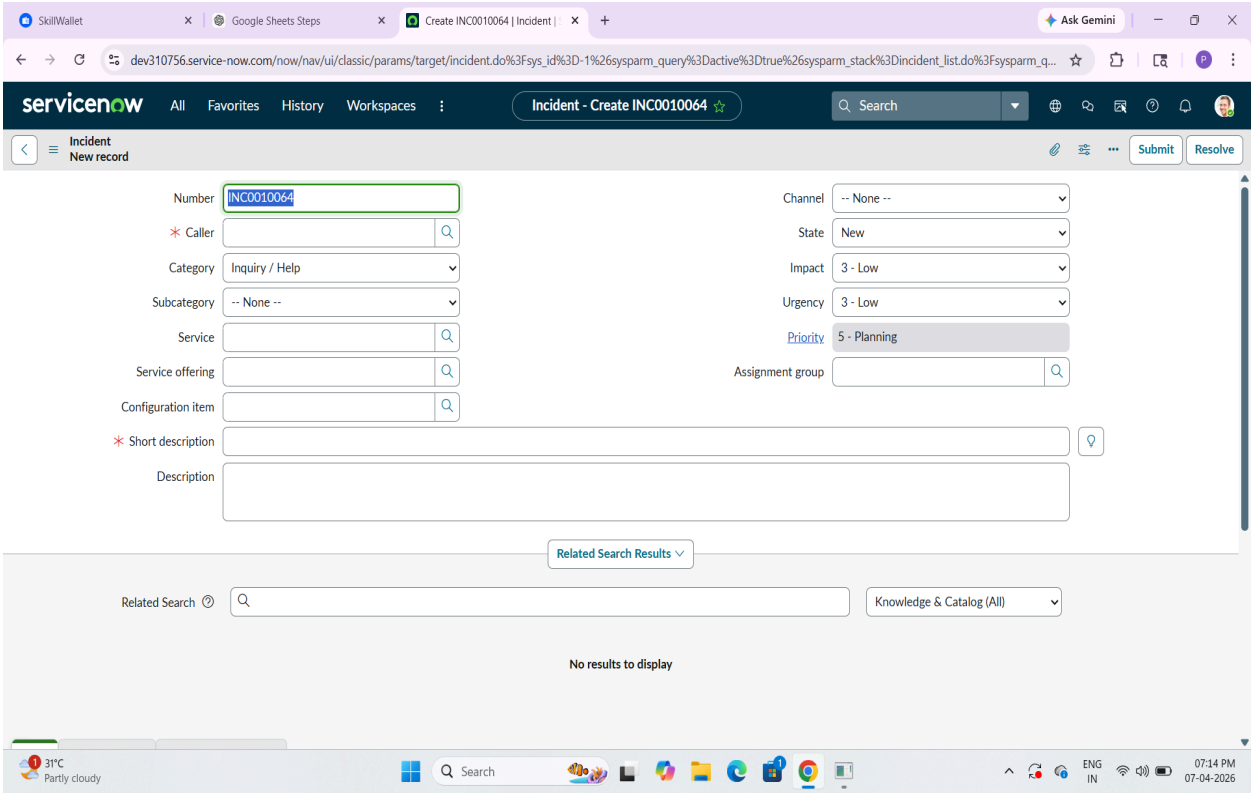


Dot walking

Activity 1:Display department to the assigned to user

1. Open service now.
2. Click on All >> incident
3. Select create new under incidents
4. There is no field like department in the form

5. Email and manager fields are not visible

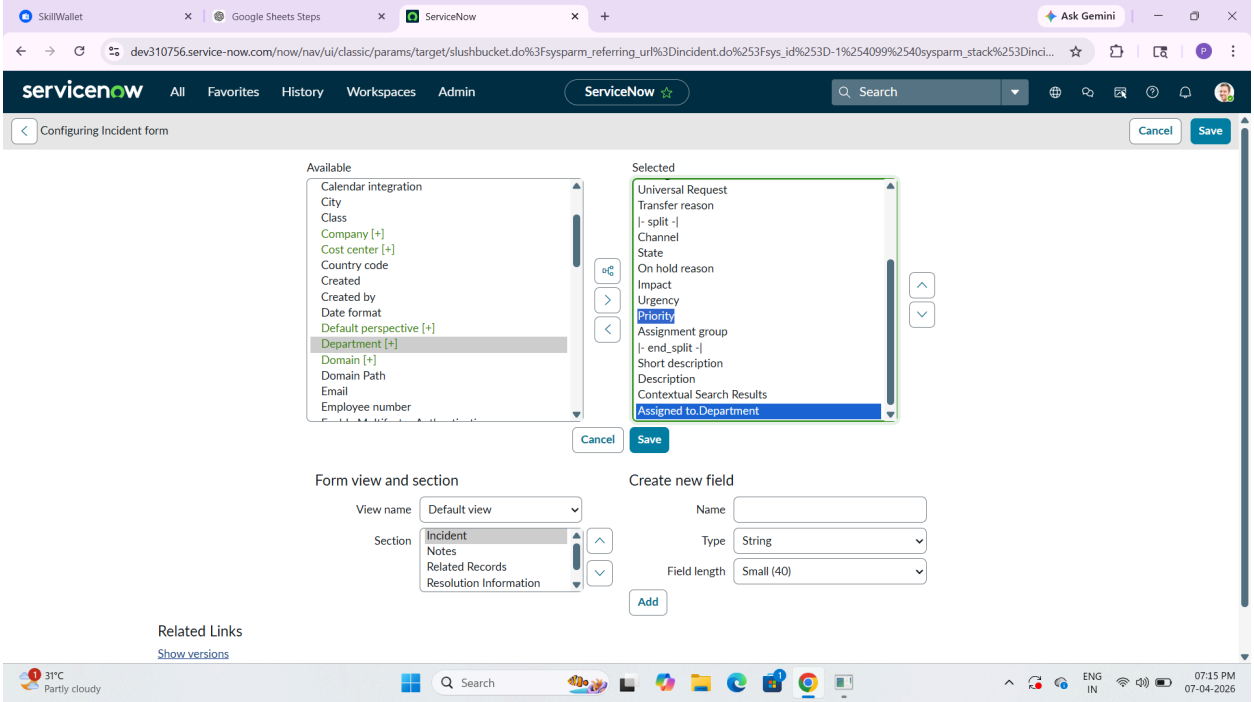


6.By using dot walking retrieve the data without opening the record

7.Click on context menu go to configure and select form layout

8.Select assigned to.department as mentioned below

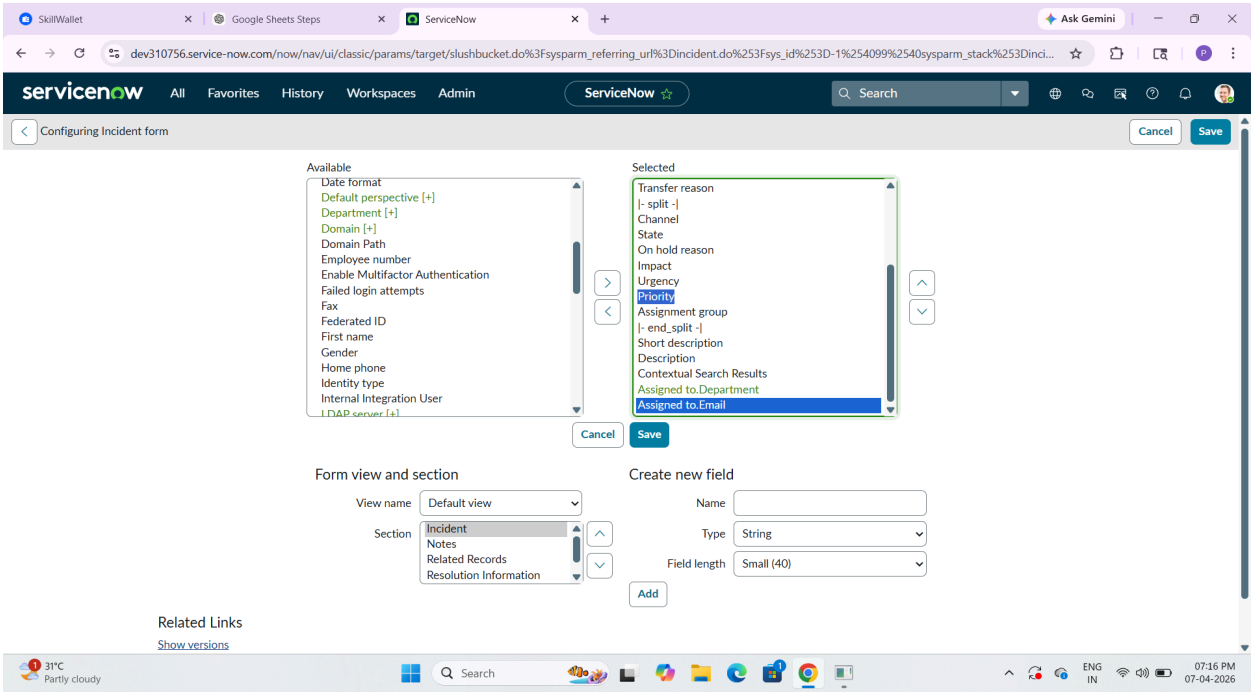
9.Click on save.

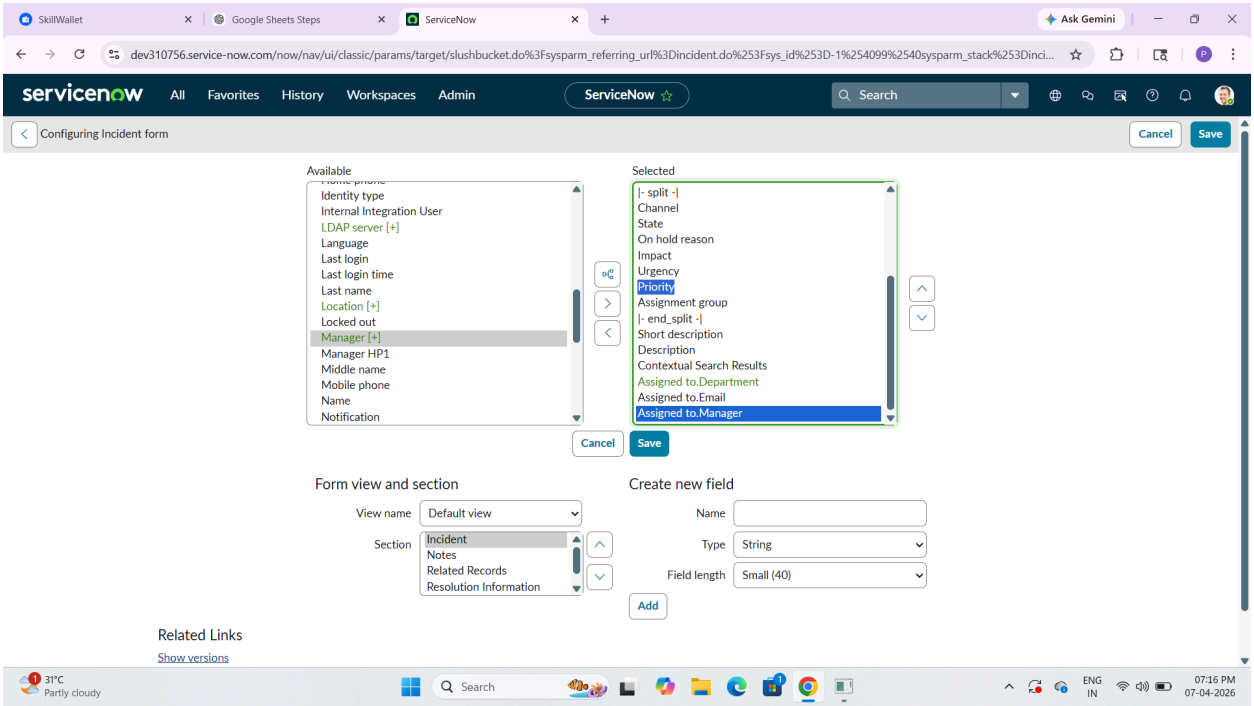


10.Add another field assignment.email.

11.Also add assignment.manager field

12.Click on save.

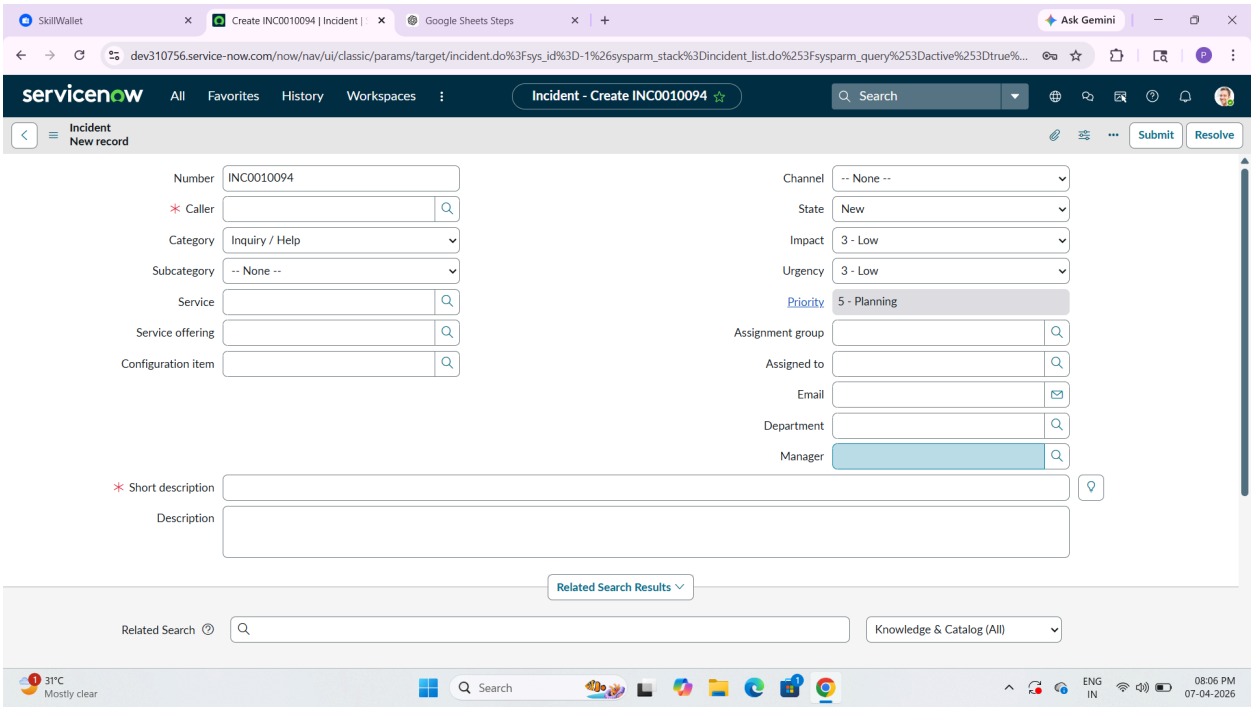




13.Open an incident form

14.Fill the mandatory fields and assigned to just imported user

15.Then department and email field is automatically filled

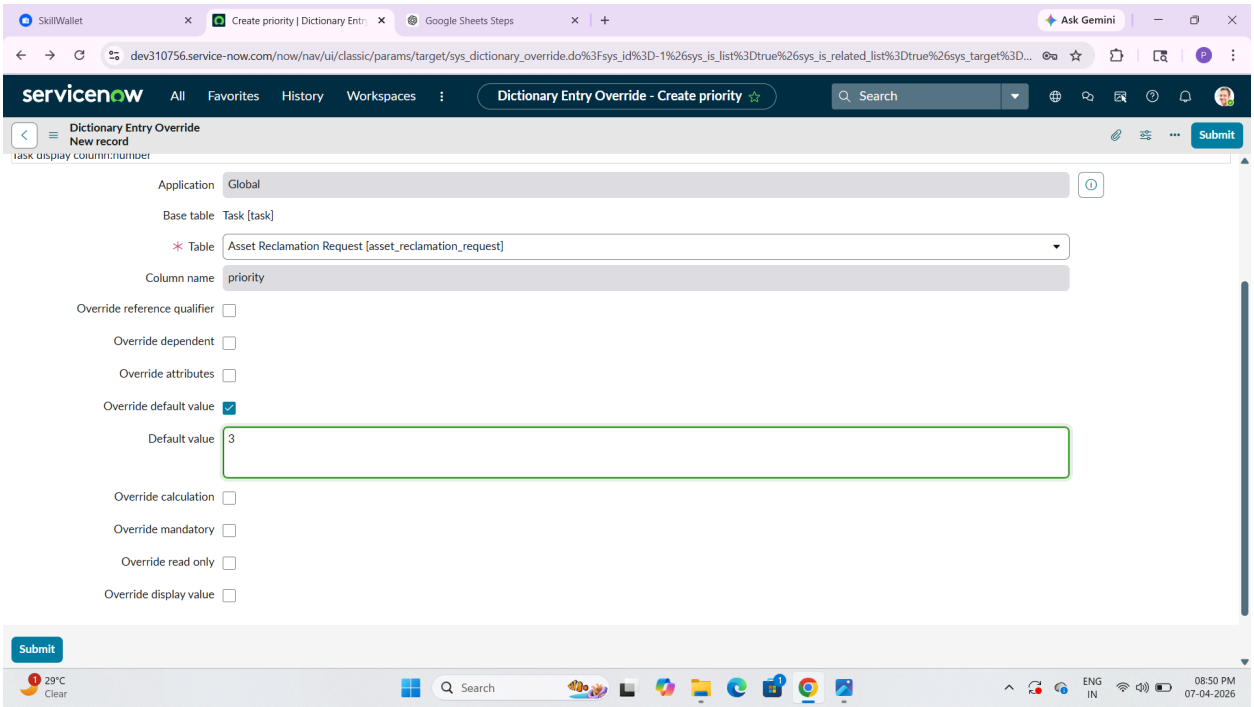


Dictionary override

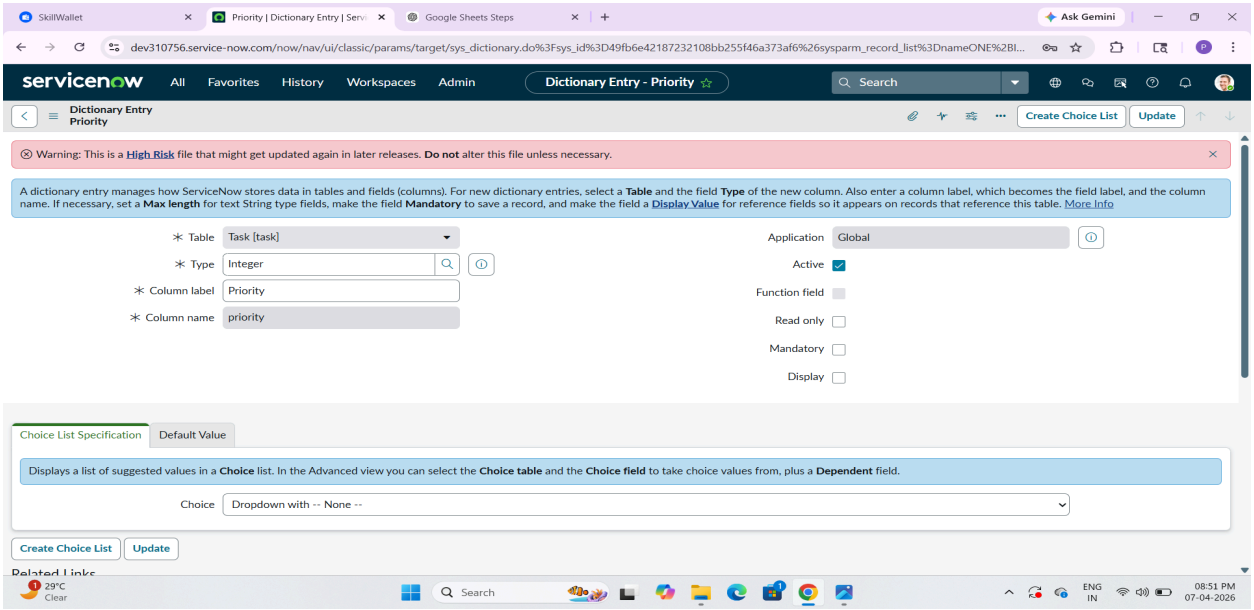
Activity 1:Make the state to 3-moderate in incident

1. Navigate to All → System Definition → Tables.
2. Either:
3. Use the existing Incident table (which extends Task), OR
4. Create a new table (e.g., u_incident_table) and set Extends Table = Task.
5. Open the Incident (or extended) table record.
6. Go to the Columns related list and open the Priority field. Notice the default value is inherited from the Task table (e.g., 4 – Low).
7. Scroll down and locate the Dictionary Overrides related list.
8. Click New under Dictionary Overrides.
9. Fill the following details:
10. Table: Incident (or your extended table)
11. Column name: Priority

12. Check Override default value
13. Set Default value = 3
14. Click Submit.



15.Open a new Incident record and verify that the Priority now defaults to 3 – Moderate, while the Task table still retains its original default value.



Conclusion

The **Automating Employee Data** project successfully streamlined the process of managing employee information by reducing manual data entry, minimizing errors, and ensuring data accuracy. By integrating automation tools and processes, employee records can now be updated, tracked, and maintained efficiently, saving time for HR teams and improving overall organizational productivity.

This project demonstrates how automation can enhance operational efficiency, provide real-time insights, and support data-driven decision-making, laying the foundation for scalable and error-free employee data management in the future.
